---

Cloud & AI Infrastructure Engineer with 12+ years of experience managing enterprise-scale Azure cloud infrastructure, DevOps automation, cloud operations, deployment engineering, and production support across SaaS and AI-enabled environments. Proven expertise in building scalable, secure, and highly available cloud-native platforms supporting business-critical applications and modern distributed workloads.

Experienced in Kubernetes orchestration, Terraform-based Infrastructure as Code (IaC), CI/CD automation, observability platforms, cloud governance, and multi-cloud infrastructure management. Strong background collaborating with engineering, DevOps, and data teams to optimize infrastructure reliability, deployment efficiency, operational scalability, and security compliance.

---

## PROFESSIONAL EXPERIENCE:

### Insightsoftware International Pvt. Ltd.

#### Senior Cloud & DevOps Engineer | Jul 2023 – Apr 2026

- Led cloud infrastructure operations and platform support initiatives for enterprise SaaS applications hosted across Microsoft Azure environments.
- Collaborated with engineering and DevOps teams to design, optimize, and maintain scalable cloud-native infrastructure supporting high-availability production workloads.
- Supported containerized deployments using Docker and Kubernetes-based platforms including AKS for scalable application hosting and operational reliability.
- Implemented infrastructure automation workflows using Terraform, Python, Bash, Azure DevOps, Jenkins, and GitLab CI/CD.
- Improved deployment reliability and operational efficiency through CI/CD standardization, automation, and release optimization initiatives.
- Managed monitoring, observability, and incident response processes using Azure Monitor, Application Insights, Log Analytics, and Datadog.
- Supported cloud-hosted applications, backend services, APIs, authentication systems, and distributed integrations across enterprise production environments.
- Collaborated with development teams to troubleshoot performance bottlenecks, deployment failures, API latency issues, and backend workflow disruptions.

- Assisted in implementing secure cloud operational practices involving IAM controls, RBAC policies, network segmentation, and governance standards.
  - Participated in disaster recovery planning, operational continuity exercises, backup strategies, and infrastructure resiliency initiatives.
  - Developed operational runbooks, deployment documentation, troubleshooting guides, and automation scripts to improve operational maturity and service reliability.
  - Participated in critical incident management, production support activities, deployment validations, and on-call operational support rotations.
- 

## **RateGain Travel Technologies**

### **Cloud Operations & Data Engineer | Mar 2019 – Apr 2023**

- Managed production support operations for enterprise cloud-hosted applications, backend services, ETL systems, and business-critical infrastructure.
  - Automated operational workflows, deployment support activities, and recurring maintenance tasks using Python and Bash scripting.
  - Collaborated with engineering and support teams to improve infrastructure stability, monitoring coverage, deployment efficiency, and operational reliability.
  - Supported release management, deployment validation, operational troubleshooting, and cloud support activities across Linux and cloud environments.
  - Performed database optimization, SQL debugging, and backend troubleshooting across MSSQL and Oracle SQL systems.
  - Assisted in monitoring APIs, integrations, distributed applications, and backend services for operational stability and performance optimization.
  - Participated in incident management, root cause analysis, escalation handling, and production issue resolution for customer-facing enterprise applications.
  - Improved operational processes through proactive monitoring, automation initiatives, and troubleshooting standardization practices.
  - Implemented SSO and federated SSO using OKTA and EntraID.
- 

## **LEADERSHIP & COLLABORATION**

- Collaborated cross-functionally with engineering, DevOps, QA, and support teams to improve infrastructure scalability, operational stability, and deployment efficiency.
- Contributed to cloud modernization, operational automation, and platform reliability initiatives across enterprise environments.
- Supported operational governance processes aligned with ITIL practices including incident, problem, and change management.
- Mentored junior team members on troubleshooting methodologies, monitoring practices, deployment workflows, and operational best practices.

- Acted as a key technical stakeholder during production incidents, release coordination, deployment validation, and critical support escalations.
- 

## PROJECTS

### AI Infrastructure & Cloud Automation Lab

- Built containerized cloud-native environments using Docker and Kubernetes to support scalable AI and automation workloads.
  - Explored deployment models for LLM-based applications and agentic AI orchestration frameworks including LangGraph, CrewAI, and AutoGen.
  - Implemented Terraform-based infrastructure provisioning workflows for automated cloud environment setup.
  - Integrated Redis-based caching and observability tooling for infrastructure monitoring and operational visibility.
  - Worked on centralized logging, monitoring, deployment automation, and scalable infrastructure practices for AI-enabled workloads.
- 

## Technical Skills

- **Cloud Platforms:** Azure (VNet, Azure SQL, Blob Storage, Azure Monitor, Key Vault, Azure AD, RBAC, Azure Data Factory), AWS (EC2, VPC, IAM, RDS, Route53, Lambda, CloudWatch)
- **Infrastructure as Code:** Terraform, ARM Templates, Bicep (Working Knowledge), CloudFormation
- **Databases:** SQL Server, MySQL, PostgreSQL, IBM Db2
- **Automation:** Python, PowerShell, Bash
- **Monitoring:** Azure Monitor, Datadog, CloudWatch, New Relic, Prometheus
- **Security:** PCI DSS, IAM, RBAC, Encryption at Rest/In Transit, Secrets Management, Network Segmentation, OKTA and EntraID
- **Networking:** Azure VNet, NSG, VPN, DNS, Load Balancers, IIS, SFTP

## CLIENT & STAKEHOLDER MANAGEMENT

- Served as a primary technical point of contact for enterprise customers, engineering teams, and business stakeholders.

- Assisted customers with technical onboarding, deployment support, API integrations, configuration management, and issue resolution.
  - Communicated complex technical issues effectively with both technical and non-technical stakeholders.
  - Proactively identified recurring operational issues and recommended improvements for performance optimization and operational stability.
- 

## EDUCATION

### Bachelor of Science (B.Sc.) – Mathematics

CCS University

---

## CERTIFICATIONS

- CompTIA Cloud Essentials+
- Microsoft Azure Fundamentals (AZ-900)
- Preparing for Azure Administrator Associate (AZ-104)
- SQL for Data Science
- Kubernetes & Cloud-Native Infrastructure Learning Path
- AI Infrastructure & MLOps Learning Exposure
